

## SE 1.1

The following is a list of changes that have been made to TOPVIEW SE Version 1.1 (whose predecessor was Version 1.0).

Note that all Version 1.0 projects and auxiliary files are totally compatible with Version 1.1.

### General Improvements:

- A valid subscription must now be purchased in order to use the TOPVIEW SE program (see Security and Renew Subscription for further details).

### Miscellaneous:

- The Add Help Line option now allows you to add the desired bisecting help line by selecting the edges in the general location you want to bisect between.
- The Import Plan Image option now also allows files of type .IVS (Builders Exchange) to be listed. Please let us know if there are any other file extensions you would like listed.
- The Save New Positions to Header Layout option (via Plot) now also saves the position of the roof sections (including dimensions, notes and arrows) by updating the Drawing Area header appropriately (see Header Information for further details).

### Bug Fixes:

- The lower coordinate box now always correctly displays the offset from the previous point item when adding a point item.
- The Add Help Line option is now more likely to be successful when bisecting the angle between two parallel edges.
- Line intersection computation has been improved (especially at smaller scales involving horizontal and vertical lines).

SE 1.0

TOPVIEW SE Version 1.0 is the first official release of TOPVIEW SE.
